

NAPCO's GSM Device Activations Up 27% Year-over-Year

- Starlink CDMA to Launch in November -

AMITYVILLE, N.Y., Oct. 14, 2014 /[PRNewswire](#)/ -- **NAPCO Security Technologies, Inc.** (Nasdaq: NSSC), one of the world's leading solutions providers and manufacturers of high-technology electronic intrusion security, connected home, video and fire systems, as well as enterprise-class access control and door locking products, today announced it will launch a CDMA version of its highly successful Starlink 3G/4G Wireless Radio in November. This move will further solidify NAPCO's foothold in the growing alarm monitoring cellular communicator category.

Richard Soloway, Chairman and President stated, "Hard-wired phone lines are increasingly disappearing, leaving a cellular-based communication path as the preferred method to transmit monitored alarm signals. Early versions of alarm communicators worked on the 2G cellular network, which is being replaced by 3G/4G. Sales of our Starlink™ 3G/4G Radios have increased dramatically, with GSM device activations up nearly 27% for the twelve months ending August 31, 2014 versus the prior twelve month period, due to the market demands of replacing an estimated 2 million, currently installed, 2G radios."

This upgrade requirement, as well as the continued need to replace landlines, has driven great growth in both the sale of communication devices, as well as providing NAPCO with the ability to market Starlink Radio Service as a source of subscription-based income for the Company.

Mr. Soloway added, "During our last fiscal year, Starlink-based, recurring revenue income rose by a solid 87%. We feel our extension into the marketplace with the launch of Starlink CDMA, will extend our network penetration and continue to drive exceptional sales and profit growth in this lucrative market."
